Transfer of ftcihotels.com

A formal request from the Federation of Tibetan Cooperatives in India Ltd. to transfer the domain name, its DNS control, the website and the email service into the Federation's own keeping.

For Ms Tashi · Webnock

FROM	Federation of Tibetan Cooperatives in India Ltd. (FTCI) CA-10, SMV Layout, 3rd Block, Sonnenahalli, Ullal Upanagar Post, Bengaluru – 560110, Karnataka, India nyamdeloffice@gmail.com · +91 76249 59954
TO	Ms Tashi Webnock <i>postal address — to be completed by FTCI</i> <i>email address — to be completed by FTCI</i>
COPY TO	Mr Prashanth M.P — shown as the registrant, administrative and technical contact for ftcihotels.com on the registry record
DATE	23 August 2026
REFERENCE	FTCI/DOM/2026-08-23 — Transfer of ftcihotels.com
SUBJECT	Authorisation and request for the complete transfer of the domain ftcihotels.com , its DNS records, website and email service

1. Purpose of this letter

Dear Ms Tashi,

The Federation of Tibetan Cooperatives in India Ltd. ("FTCI") thanks you for registering and hosting **ftcihotels.com** on our behalf, and for the work you have done for the Federation to date.

FTCI has now established its own web presence and wishes to bring the management of this domain in-house. **This letter authorises and requests the complete transfer of the domain name, its DNS control, the website and the email service** to FTCI's nominated administrator named below.

The intention is a clean and complete handover, so that FTCI can maintain both of its domain names and a single web presence without further call on your time. Nothing in this letter is a complaint about the service provided.

2. The domain concerned

These details are taken from the public registry record on 23 August 2026 and are given so there is no ambiguity about which asset this letter concerns.

Item	Value
Domain name	ftcihotels.com
Registrar of record	PDR Ltd. d/b/a PublicDomainRegistry.com (IANA ID 303)
Registered	30 December 2025
Expires	30 December 2026
Registry status	clientTransferProhibited
Current nameservers	ns1.bh-3.webhostbox.net ns2.bh-3.webhostbox.net
Current web host	WebHostBox — server IP 208.91.198.2
Zone technical contact (SOA)	prashanth.webdesigner@gmail.com

Please note the expiry date. The registration expires on **30 December 2026**. Until the transfer completes, FTCI asks that you do not allow the domain to lapse, and that you tell us immediately if any renewal payment falls due. FTCI will reimburse any renewal you pay on our behalf in the meantime.

3. Incoming registrant and administrator

FTCI nominates the following person to hold and administer the domain from the date of transfer:

Field	Value
Registrant name	Ms Tenzin Tsetan
Organisation	Federation of Tibetan Cooperatives in India Ltd.
Postal address	<i>to be completed before sending</i>
Email address	<i>to be completed — see the note below</i>
Telephone	<i>to be completed before sending</i>

The email address above must not be an @ftcihotels.com address

Every confirmation in this process — the change-of-registrant approval and the registrar transfer approval — is sent by email to the address on the domain record. That mailbox is presently hosted on the same server being handed over. If it were used, the handover could disable the very mailbox needed to approve it. Please use an address that does not depend on ftcihotels.com or on WebHostBox.

4. What FTICI requests

FTCI requests all four of the following. They are separate operations, and completing one does not complete the others, so each is set out on its own.

A. Update the contact details on the domain record

- ☐ Change the registrant, administrative and technical contact email on the domain record to the address given in section 3, so that FTICI receives all further correspondence and approval requests directly.

B. Transfer ownership (Change of Registrant)

- ☐ Record **Ms Tenzin Tsetan** as the registrant of `ftcihotels.com`, with the details in section 3.
- ☐ Confirm in writing once the registry record shows the change.

C. Release the domain for transfer to FTICI's own registrar

FTCI holds its other domain, **ftcihotels.org**, at Cloudflare Registrar, and wishes to keep both names in one account.

- ☐ Remove the registrar lock. The registry currently reports `clientTransferProhibited`, which prevents any transfer.
- ☐ Disable WHOIS/domain privacy if it is enabled, as it blocks transfer approval.
- ☐ Provide the **EPP authorisation code** (also called the auth code, transfer key or secret key) for `ftcihotels.com`.
- ☐ Confirm that no registrar-level transfer restriction remains.

Order matters here, and it can cost sixty days. Under ICANN's Transfer Policy, a change of registrant normally places a **60-day lock** on the domain, during which it cannot be transferred to another registrar.

FTCI therefore asks that you either **(i)** carry out request C **before** request B, or **(ii)** ask PDR whether it offers the opt-out from the 60-day lock, which must be selected **at or before** the moment the change of registrant is submitted — it cannot be applied afterwards. Please tell us which route you took. If neither is possible, please complete request C alone; FTICI will attend to ownership after the transfer.

D. Hand over the website, the email service and the hosting account

- ☐ A complete **export of the DNS zone** as it stands, in a text or zone-file format (the records known to FTICI are listed in the annex, but your copy is authoritative).
- ☐ A full **backup of the website** — all files and any database — in a restorable form, together with the WordPress administrator credentials.
- ☐ A **list of every email account, alias, forwarder and autoresponder** on the domain, with the mailbox sizes.

- ❑ Either a **full mailbox export** (in .mbox or Maildir form) or continued IMAP access for long enough for FTCI to migrate the mail itself, so that no message history is lost.
- ❑ The **cPanel / hosting control panel** login for the account, and confirmation of the hosting plan's paid-up date.
- ❑ Confirmation of the current **DKIM** arrangement (a key is published at default._domainkey) and whether the mail service is billed separately from the hosting.
- ❑ A list of any **licensed themes or plugins** in use. Licences bought through a supplier's own account usually stop validating once a site moves, so FTCI needs to know which ones to re-purchase.
- ❑ Any **scheduled tasks or cron jobs** on the account, with what each one does.
- ❑ Details of the **SSL certificate**, if it is a purchased certificate rather than one issued automatically by the hosting panel.
- ❑ A list of any **third-party integrations and API keys** in use on the site — analytics, forms, maps, spam protection, payments or booking — so that nothing stops working silently after the move.

5. What FTCI is *not* asking for

So there is no misunderstanding about scope:

- ✗ Do **not** delete the website, the mailboxes or any data. FTCI will confirm in writing when everything has been safely migrated, and only then should anything be removed.
- ✗ Do **not** change the live website or take it offline. It should keep serving visitors exactly as it does today until FTCI says otherwise.
- ✗ Do **not** change the nameservers or any DNS record yet. FTCI will do this at a planned moment, to protect the Federation's email.
- ✗ Do **not** cancel the hosting or the domain renewal until the transfer is complete and confirmed.

Why the caution about DNS. The Federation's email runs on this domain — there is a live mail exchanger, an SPF record and a DKIM signing key. A nameserver change made *before* those records have been recreated in full would stop FTCI's email, and mail lost that way gives the sender no warning at all. The danger is not the change of nameservers in itself but an incomplete copy of the zone: once every record is reproduced exactly, and still points at your server, the change is invisible to visitors and to mail. This is the single greatest risk in the handover, which is why FTCI asks to control its timing.

6. Suggested sequence

FTCI proposes the following order. Each step is small, and nothing is destructive. The order matters for a reason worth stating plainly: Cloudflare, where FTCI will hold the domain, does not accept an incoming transfer until the domain is *already* served by its nameservers. So the DNS move necessarily comes first — but it is made harmless by copying your records exactly, so that the site and the mailboxes carry on running on your server until FTCI is ready to move them.

- 1 Contact details updated**

You change the domain's contact email to the address in section 3 (request A), so every later approval reaches FTCI.
- 2 Domain unlocked and auth code issued**

You lift the lock, disable privacy if enabled, and send the EPP code (request C).
- 3 Materials delivered**

You send the zone export, website backup, mailbox list and export, and the hosting credentials (request D).
- 4 FTCI rebuilds the zone, still pointing at your server**

FTCI recreates every record — web, mail exchanger, SPF, DKIM — on its own DNS, with each one still addressed to your server at 208.91.198.2, and checks the web and mail paths end to end. Nothing has moved at this stage; the copy is only made ready.
- 5 Nameservers switched, and mail confirmed**

FTCI points the domain at its own nameservers. Because the records are identical and still reference your server, the website and every mailbox carry on exactly as before. FTCI confirms in writing that the site loads and that email is being delivered.
- 6 FTCI transfers the registration**

Only now can this happen, for the reason given above. FTCI submits the authorisation code and approves the transfer, which takes about five to seven days at the registry. The website and the email are unaffected throughout.
- 7 Ownership recorded, and the site and mail moved**

The registrant is recorded as Ms Tenzin Tsetan, and FTCI migrates the website and the mailboxes off your server at its own pace.

You may close the account

Only on FTCI's written confirmation, and no earlier, the old hosting account and its data may be closed.

There is no urgency on your side. FTCI's new website is already live on its other domain and nothing is waiting on this request. We would be grateful for a first response within **fourteen days** so that the work can be planned.

If we have not heard from you in that time, FTCI will follow up directly, and if necessary raise the matter with the registrar, PDR Ltd. / PublicDomainRegistry.com. We would much rather complete this with your help, and expect to.

7. What we ask you to send back

A short checklist, so nothing is missed:

- ☐ Written confirmation that the domain contact email has been updated
- ☐ Confirmation that the registrar lock has been removed and privacy disabled
- ☐ The EPP authorisation code for ftcihotels.com
- ☐ Confirmation of whether the 60-day transfer lock has been avoided, and how
- ☐ The DNS zone export
- ☐ The website backup — files and database — and the WordPress administrator login
- ☐ The list of email accounts, aliases and forwarders
- ☐ The mailbox export, or IMAP access with a stated cut-off date
- ☐ The cPanel / hosting login, and the date the hosting is paid up to
- ☐ Confirmation of who has been paying for the domain and the hosting, and of any amount outstanding, so FTCI may settle it

8. Annex — DNS records as they stand

Observed from the public DNS on 23 August 2026 and given for completeness. Your own zone export takes precedence over this table, which may not show private or unpublished records.

Type	Name	Value
NS	ftcihotels.com	ns1.bh-3.webhostbox.net ns2.bh-3.webhostbox.net
A	ftcihotels.com	208.91.198.2
CNAME	www	ftcihotels.com
MX	ftcihotels.com	0 mail.ftcihotels.com
A	mail	208.91.198.2
A	webmail	208.91.198.2
A	cpanel	208.91.198.2
CNAME	ftp	ftcihotels.com
TXT (SPF)	ftcihotels.com	v=spf1 a mx include:websitewelcome.com ~all
TXT (DKIM)	default._domainkey	v=DKIM1; k=rsa; p=MIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8A... (RSA public key present)
SOA	ftcihotels.com	ns1.bh-3.webhostbox.net · prashanth.webdesigner@gmail.com · serial 2026070301
DMARC	_dmarc	none published (confirmed absent, not merely unread)

On DKIM. The published key is only the public half; the private half stays on the mail server and cannot be moved. FTCI expects to generate a new key on the new mail service and publish it at cutover. We mention it so that neither side is surprised when the old record is replaced rather than copied.

9. Authorisation

The Federation of Tibetan Cooperatives in India Ltd. authorises Webnock to carry out the requests set out in this letter, and authorises the release of the domain **ftcihotels.com**, its DNS records, its website and its email service to **Ms Tenzin Tsetan** acting on the Federation's behalf.

FTCI confirms that it is the beneficial owner of this domain, which was registered on its behalf and for its business.
